STRONTIANITE
SrCO₃

In limestone or dolostone as nodules and veinlets, and as crystals in vugs. Much less common than celestine in Michigan. Southern Peninsula.

Alpena County: Reported by Morris (1983) as a rare species in the National Gypsum Company quarry (formerly Huron-Portland Cement Company quarry, now LaFarge-Great Lakes Region) at Alpena: Associated are calcite, dolomite, barite, pyrite, marcasite, sphalerite, and rare chalcopyrite.
